Subject: Right of Way Corridor Survey & Analysis Guidelines

Attached you will find a file that contains guidelines that are to be used by the On-Calls, in the performance of analyzing and calculating the highway right of way corridors within the State. Although the understandings behind these procedures have historically been in place and used by the majority of the On-Call consultants and ADOT R/W staff, it was decided that they needed to be put in writing due to "popular" demand and to assist the many new On-Call firms that have been added in the last few years. This document will also be placed on the ADOT R/W Plans Section temporary website under the interim policies heading.
